

High Speed Pointer

300 Parts Per Minute

Capable of Pointing 300 Parts per Minute

A truly revolutionary machine, our high speed pointers produce millions of parts in many of the auto industries' largest fastener plants. With the capability to produce both large and small parts at high speed, our pointer has typically replaced several of our competitor's machines.

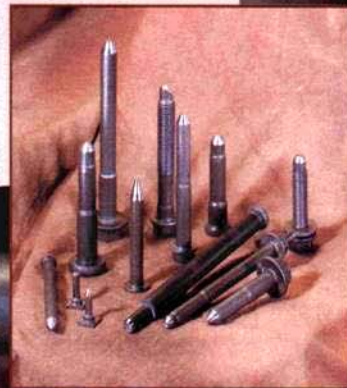

A robust, simple design assures reliability. A high powered, high speed cutting process eliminates the need for coolants. Heat is carried away with the cutting chip. A unique chip evacuation system ensures complete separation of chips and parts. The result is a clean environmentally and user friendly machine.

If you're looking for the best solution to the increased demand for pointed fasteners... give us a call. Specifications and an informational video will be provided upon request.
